

Rössing Uranium is one of the largest Uranium extraction mines near Arandis in Namibia. The project includes the structural investigation of the dilapidated concrete foundations and floor slab of their calcine reactor in their leach line, providing a durable solution and compiling the complete associated workpack for the project. Concrete portions that suffered sulfuric acid decay was removed, concrete repairs were done and acid proofing were installed to all concrete elements .

RÖSSING CALCINE REACTOR

Concrete base and slab repairs

PROJECT STATS

Value NAD 0.24 million
USD 0.01 million (ROE 16.24)

Location Erongo Region, Namibia

Client Rössing Uranium Ltd.

Start 06/2019

Finish 10/2019

SERVICES

- Project management
- Preliminary & detail designs
- Tender documents, process & evaluation
