BURMEISTER & PARTNERS (PTY) LTD.

UNLOCKING WEALTH THROUGH ENGINEERING INGENUITY

Africa offers an abundance of raw resources and opportunities, and we focus on translating these opportunities into wealth. Since our inception in 1978, we have been an independent engineering firm of planners, designers, engineers, financial consultants, project managers, technical specialists, and facility managers working across the full spectrum of today's infrastructure and built landscape. In collaboration with our clients, we convert exciting ideas into tangible projects and sustainable solutions.

Our strategy is to offer involvement not only at planning and engineering stages of new infrastructure and built developments, but also to provide pre-planning and after-sales support sometimes needed to successfully set-up, run and sustain new business ventures and infrastructure projects. We offer complete innovative engineered solutions with legal compliance throughout the project life-cycle.

OUR CAPABILITIES & SERVICES

BURMEISTER & PARTNERS is a multi-disciplinary consulting engineering company, offering the full spectrum of civil, structural, mechanical, electrical and project management services with over 41 years' local and African experience.

Our business philosophy is to be fluid, responsive and adaptable to the ever changing industry demands, to create smart, creative and sustainable solutions for our clients whilst having due regard for the environmental, social and economic realities. It is this philosophy that has kept our company sound, relevant and steadfast. Our over 41 years of experience has ensured an intrinsic understanding and knowledge of the Namibian and African engineering industry market demands.

Following hereafter are digests of our diverse skills gained which translate into the professional services we can offer to you.

AGRI-& INDUSTRIAL BUSINESS

There is a pressing need in developing countries to become self-sufficient and reduce their reliance on imports. In order to plan and execute large agricultural and industrial projects one must have the right team.

Our Agri- & Industrial Engineering Division is made up of a team of professionals that can deliver successful projects because they have the experience to execute sound feasibility studies & economic analysis, to do the required technical designs and supervision and also do the required post-construction operations of the project.

- Irrigation, greenhouses, composting & biogas utilization
- Cold storage & refrigeration
- Industry utilities (electrical switchgear, process automation, industrial ventilation)

HYDRO-BUSINESS

BURMEISTER & PARTNERS has divisions that provide the full spectrum of water engineering services (clean and waste water), including the design and construction supervision of water facilities, pipelines and canals. In addition we offer our clients a range of professional hydro-related advisory services for new and also on existing water infrastructure to ensure the effective stewardship of water, which is one of our most valuable resources.

- Waste water treatment
- Bulk water supply & storage
- Potable water treatment
- Sewerage reticulation
- Storm water solutions
- Leakage services,
- Network modelling
- Feasibility studies
- **Pump stations**

- Surge analysis
- Water resource management
- Institutional & technical assistance
- Water quality control
- Rehabilitation of existing infrastructure
- Environmental impact assessment studies
- Master planning (involves the analyzing, forward planning & implementation of water policy in order to rehabilitate and extend all municipal services in one comprehensive framework)

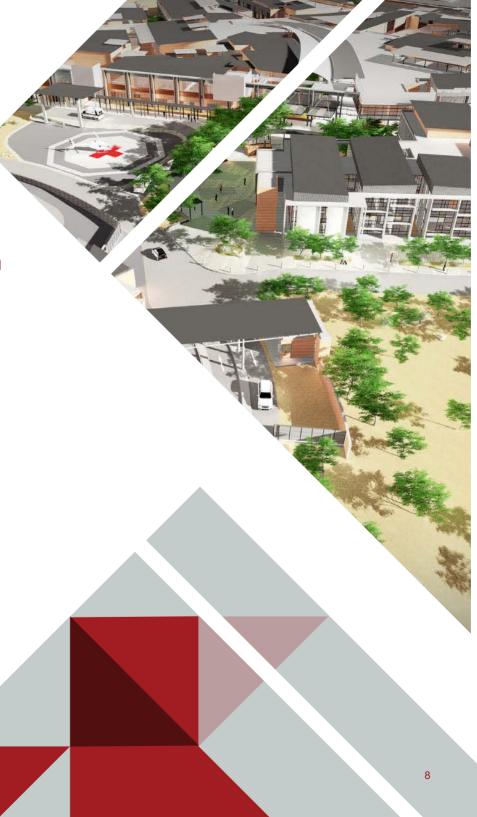

HEALTH & PHARMACEUTICAL SOLUTIONS

The health sector is one of a country's backbone sectors, especially in a developing country, and we pride ourselves in our involvement as engineers to provide professional engineering solutions in the health and pharmaceutical sectors.

We have been instrumental in the development and upgrading of health facilities in urban and rural locations.

- Pharmaceutical plants
- Medical storage facilities
- Health laboratories
- Regional clinics
- Regional hospitals

- Oncology facilities
- Psychiatric facilities
- Facility audits
- Facility management
- Incineration

MINE INFRASTRUCTURE SOLUTIONS

BURMEISTER & PARTNERS has divisions that provide the full spectrum of engineering services related to mining activities, including professional advisory services which include structural condition assessments and water & energy audits. As a multi-disciplinary engineering company, we house all the required engineering experience related to mining infrastructure design, maintenance and upgrading.

- Pumpstations & pipelines
- Structural audits & designs
- Water retaining structures
- Pavements
- Electrical solutions for mining activities
- Mechanical systems & equipment
- Fire engineering
- Renewable energy solutions

- Bulk conveying & material handling
- Bulk earthworks optimisation
- Process automation
- Mine de-watering systems
- Renewable energy systems

Our spectrum of services within the field of building and industrial projects is broad and covers an array of building structures. Our team of experienced structural engineers is committed towards optimized designs in order to deliver a safe and cost-effective product to the client.

We provide engineering related expertise for the following:

• Community & residential developments (schools, stadiums, hospitals, estates, houses and housing schemes)

• Retail & commercial developments (shopping centres, business parks, industrial parks and office blocks)

• Aviation (hangars, terminals, runways, aprons)

Engineering services for these buildings, which we provide, include:

Mechanical: heating ventilation & air conditioning (HVAC), refrigeration, fuel / gas piping

distribution, fire engineering, plumbing & hot water generation, vertical

transportation, sustainable/green building solutions

Electrical: low voltage systems, distribution boards, switchgear, residential and urban

lighting, communication systems, security and alarm systems, standby

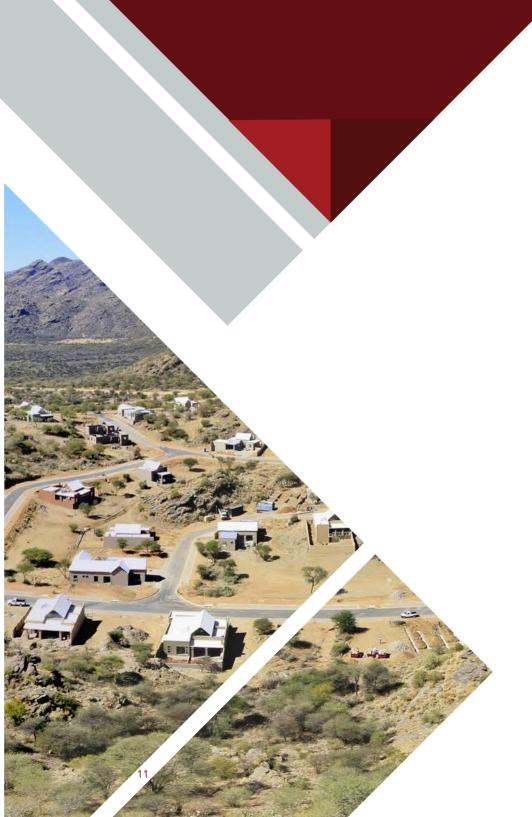

power, building management systems, lightning protection

Civil: residential and urban: bulk earthworks, traffic designs, water

supply, stormwater-, waste water- and effluent-management

Structural: buildings, water retaining structures, pump stations,

culverts and bridges

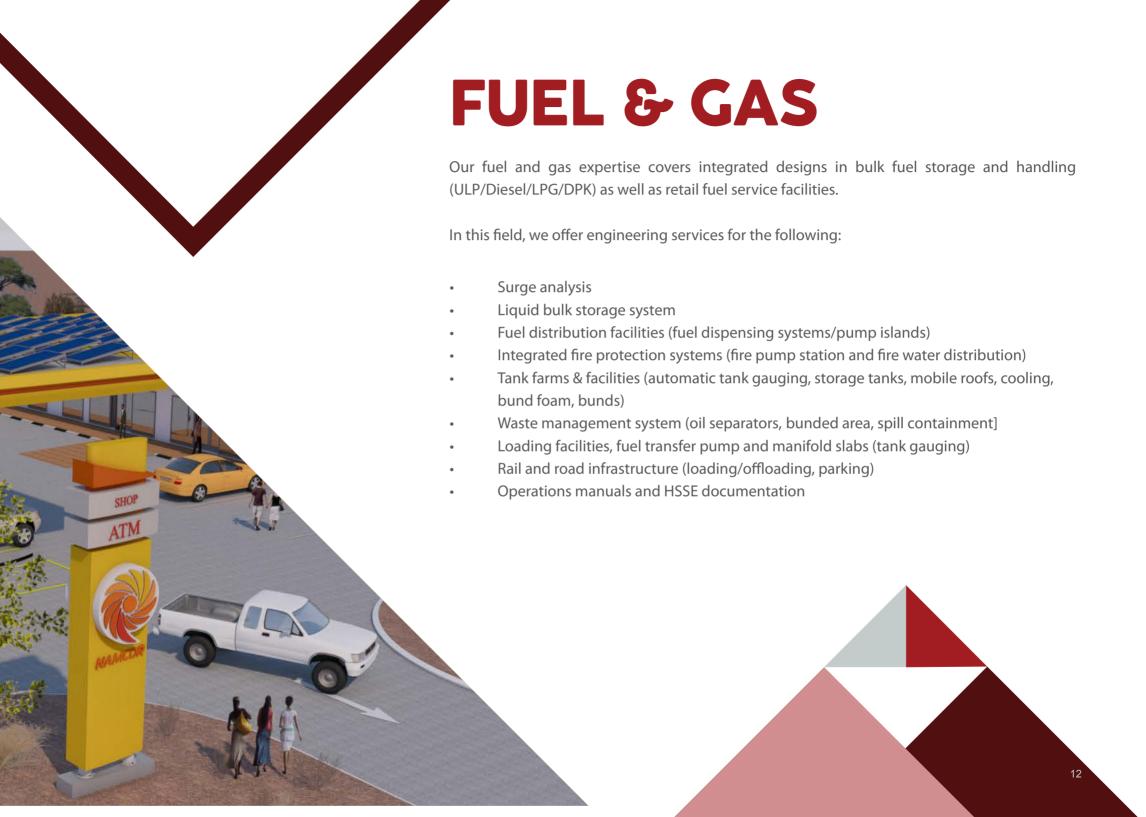

URBAN DEVELOPMENT SOLUTIONS

We have ample experience in the development of urban infrastructure. We provide engineering services within the fields of urban sewer, water, transportation, energy and building infrastructure, with the emphasis on sustainable development and green infrastructure. Our experience in urban infrastructure development stretches across multiple countries in Southern Africa, including the recent large-scale middle income and luxury residential developments in and around the capital of Namibia (the Elisenheim, Finkenstein and Otjomuise township developments).

We provide the following engineering expertise:

- Owners engineering services
- Water supply & storage
- Sewer reticulation & lifting pump stations
- Effluent treatment plants
- Urban and residential street & storm water designs
- Electrical (substations, MC/LV reticulations, smart home automation)
- Traffic signaling & urban street lighting
- Fiber-to-home data networks & CCTV surveillance systems
- Fire engineering

SPECIAL PROJECTS

Large and complex projects often require and alternative contractual approach. We offer a wide variety of Owner's Engineering services whereby the Project Owner's specific requirements are assessed and our services are then tailored to their specific needs. Financing agents are often part and parcel such projects and we also cover project financing services.

- Owners engineering services
- Turnkey, EPC, EPCM and BOOT projects
- PPP solutions
- Project financing advice
- Bankable feasibility studies
- Smart farming (farm owners and feed producers)
