It was the intention of the Government of Namibia, through the ODC, to establish a pharmaceutical manufacturing facility in Namibia for the production of generic medicines for human consumption. With this project they wished to promote the development of the pharmaceutical manufacturing industry in Namibia. It would also have advantages for the Namibia economy not only relating to import substitution, regional export promotion, job creation and skills development, but also stimulating the development of research capacity and initiatives in order to facilitate the establishment of a pharma-tech industry in Namibia. This would be in line with stated Vision 2030, Growth at Home as well as the Harambee Prosperity Plan objectives.

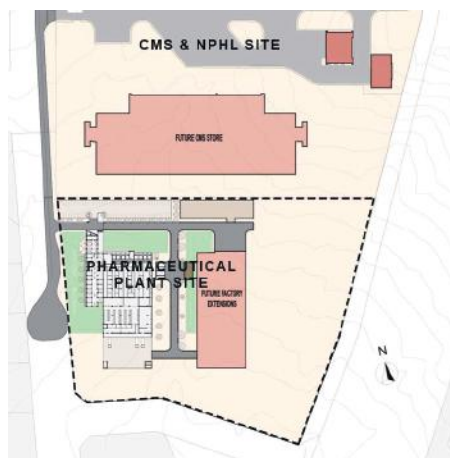

Initially it was the intent of Government to finance the project from own sources and to utilise technical expertise from Cuba to assist with development and initially manage this facility. Joint venture or a public-private-partnership project as possible alternatives to a solely government funded project were also under consideration. A MOU was signed between the Cuban and Namibian governments but when under the scrutiny of the Attorney General due to economic constraints the project was put on hold.

# PHARMACEUTICAL MANUFACTURING

## Okahandja

### PROJECT STATS

- Value** NAD 321.6 million  
USD 19.8 million (ROE 16.24)
- Location** Okahandja, Namibia
- Client** Offshore Development Company
- Start** 03/2016
- Finish** On hold

### SERVICES

- Preliminary & detail design
- Specifications
- Tender drawings & documents
- Construction supervision
- Compiling business plan
- Research visit to Cuba
- Reports
- Cost estimates

- Civil
- Structural
- Mechanical
- Electrical
