

The project entails the management and buildout of an integrated beef value chain development on 6,000ha located in Bugesera district, some 100km from the capital city of Kigali, Rwanda. This site is well suited for beef farming and is developed with infrastructure such as access roads, electricity as well as irrigation and livestock water network/infrastructure.

Scope of services:

- Data mining (fact-finding, analysis, groundwork).
- Sizing, scoping & determining appropriate scale of project economic activities.
- Technical conceptualisation of project of the following business units:

Farm stocking plan;
Fodder and feed production plan;
Beef cattle feedlotting;
Feedmilling and processing;
Abattoir and meat processing.

- Preparation of business concepts & processes, standard operating procedures & documentation.
- Developing specifications & overseeing the phased construction of integrated beef value chain development.
- Management control & operational support on the farm (resident farm management team at GAKO farm).
- Recruitment of human resources and training.
- Financial management & control (due diligence/projections/forecasts)
- Market penetration strategy;
- Rangeland modelling and planning (fodder flow systems) to increase farm production and productivity.
- Traceability network, animal health systems design, development & management.
